

December 5, 1930.

Mr. Joseph H. Pecker,  
900 Victory Building,  
10th and Chestnut Sts.,  
Philadelphia, Penna.

Dear Mr. Pecker:

In accordance with our telephone conversation of today, I am glad to give you the following information:

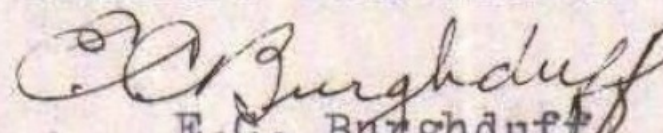

All studs used in our Magnesium or Aluminum castings are U. S. Standard thread. The S.A.E. thread pulls out too easily and gives no satisfaction at all.

We are sending you a print showing the depth which we will be able to make the grooves on our standard starter jaw to accomodate your starter.

Sincerely,

CHEVROLET AIRCRAFT CORPORATION

By

  
E.C. Burghduff  
Sales Engineer.
